
EDUCATION

Bachelor of Technology (B.Tech) in Artificial Intelligence & Machine Learning
Uttarakhand Technical University

08/ 2022 – 06/2026
Dehradun, Uttarakhand

Higher Secondary Graduate with Computer Science
Kendriya Vidyalaya No.2 N.H.P.B Banbasa ,Champawat, Uttarakhand

04/ 2021 – 04/2022
Champawat ,Uttarakhand

EXPERIENCE

AI Intern

06/2026 – Present

Wavygo

- Developed AI-powered features by applying machine learning, NLP, and Generative AI techniques for travel-related applications.
- Collected, cleaned, and analyzed data to support model development, evaluation, and performance optimization.
- Collaborated with cross-functional teams to build, document, and deploy scalable AI solutions using Agile practices.

AI Intern

01/2025 – 06/2025

Innovate

- Engineered a real-time data pipeline using Python and OpenCV to process and analyze live video feeds for traffic monitoring, enabling automated object detection insights at scale.
- Built and documented a YOLOv7-based inference system, producing structured output logs for downstream performance reporting and operational analysis.

SKILLS

Programming Languages: Python, C, C++, HTML, CSS, JavaScript.

AI & Machine Learning: Machine Learning, Deep Learning, Generative AI, Large Language Models, Natural Language Processing (NLP), Computer Vision, Retrieval-Augmented Generation (RAG), Prompt Engineering, AI Agents, Semantic Search, Supervised & Unsupervised Learning, Feature Engineering, Model Evaluation, Data Preprocessing, CNN.

Data Science & Analytics: Data Analysis, Exploratory Data Analysis (EDA), Statistical Analysis, Data Cleaning, Data Transformation, Data Validation, Feature Engineering, KPI Tracking, Trend Analysis, Business Intelligence, Data Storytelling, Insight Generation.

Data Visualization & BI: Power BI (DAX, Power Query), Tableau, Looker, Advanced Microsoft Excel, Dashboard Development, Interactive Reporting.

Libraries & Frameworks: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Plotly, Flask, React.js, NLTK.

Databases & Cloud: MongoDB, MySQL, PostgreSQL, SQLite, BigQuery, AWS (S3, RDS), GCP (Big Query), JSON/CSV Data Handling.

Developer Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code, Hugging Face, Gradio, Netlify, GCP.

Deployment & Automation: REST APIs, Model Deployment, Workflow Automation, Report Automation, Script-based Data Processing, Data Pipeline Development.

Professional Skills: Problem Solving, Analytical Thinking, Cross-functional Collaboration, Stakeholder Communication, Agile Methodologies (Scrum & Kanban), Technical Documentation, Adaptability.

PROJECT

Economic Benchmark Analysis | \$9.31K Global GDP per Capita

Link: [Economic Benchmark Analysis](#)

Description: Developed an end-to-end data analysis solution to collect and analyze World Bank indicators, transforming raw data into structured insights aligned with business reporting needs. Defined key metrics and organized data to support consistent analysis and decision-making.

Key Features: Implemented automated data ingestion and preprocessing along with structured data modeling. Performed data validation to ensure accuracy and developed interactive Power BI dashboards for trend analysis, country comparisons, and performance tracking in a stakeholder-friendly format.

Technologies Used: Python, Pandas, NumPy, SQLite, Requests, Power BI, Jupyter, Matplotlib.

Outcome: Enabled reliable and repeatable analysis through a structured data pipeline, improving data accuracy and supporting insight-driven decision-making with interactive dashboards.

142% YoY Growth Analysis | Retail Sales Intelligence

Link : [Retail Sales Intelligence](#)

Description: Developed an executive-level Power BI analytics solution to analyze multi-year retail sales performance across stores and product categories, identifying KPIs critical for profitability, demand forecasting, and business performance tracking.

Key Features: Category-wise sales analysis across product segments, time-based trend visualization, dynamic interactive filters for self-service insight exploration, and insight-driven performance reporting to support business decision-making.

Technologies Used: Power BI, Power Query, DAX, Data Modeling, Data Visualization.

Outcome: Delivered a self-service analytics dashboard enabling data-driven decision-making for profitability optimization, demand planning, and strategic reporting, significantly reducing reliance on manual analysis.

Customer Experience Analytics | British Airways Service Performance

Link : [Evora](#)

Description: Developed an interactive Tableau analytics solution to analyze customer feedback and satisfaction trends, transforming review data into actionable business insights to evaluate service quality and support data-driven decision-making.

Key Features: Performed customer satisfaction analysis across service categories, identified regional trends and key performance indicators (KPIs), and developed interactive dashboards with dynamic filters for stakeholder-driven reporting.

Technologies Used: Tableau, Tableau Public/Online, Data Visualization, Dashboard Design, KPI Reporting.

Outcome: Enabled stakeholders to identify customer satisfaction trends, regional performance gaps, and service improvement opportunities through interactive dashboards, reducing manual reporting and supporting data-driven decision-making.

DetectXpert | Automated Blood Cell Detection & Classification

Link : [Evora](#)

Description: Developed an AI-powered system to detect and classify **RBCs, WBCs, and Platelets** from blood smear images using computer vision for faster hematology analysis.

Key Features: YOLOv8-based multi-class detection, real-time image inference, cloud deployment on Hugging Face Spaces, and interactive web interface using Gradio.

Technologies Used: Python, YOLOv8, OpenCV, Ultralytics, Gradio, Hugging Face Spaces, NumPy.

Outcome: Delivered a real-time, cloud-based blood cell detection solution that automated cell identification and improved diagnostic efficiency.

CERTIFICATION / TECHNICAL ACTIVITIES/

1.State Level Hackathon

2/11/25 – 09/11/25

- Designed EVORA, an interactive platform that promotes environmental awareness among students through missions, quizzes, and action-based learning instead of traditional theory.

- Implemented gamified engagement mechanisms (missions, rewards, EcoCoins) to encourage real-world

2.AlmaBetter Completed a **Full Stack Data Science Program** covering end-to-end data science and machine learning workflows.

3.Deloitte Australia's - Data Analysis on Forge

June/2025

- Completed a Deloitte job simulation involving data analysis and forensic technology.

4.Tata Data Visualisation: Empowering Business with Effective Insights Job Simulation •

July/2025

Completed a simulation involving creating data visualizations for Tata Consultancy Services.

5.Enterprise Data Science in Practice on IBM

Issued – July/2025

- Learned enterprise-level data science workflows and tools using IBM platforms.

6.Building LLM Applications With Prompt Engineering

Issued – May/2025

- Explored prompt engineering techniques to build effective LLM-based applications.
- Gained firsthand experience with large language models and their practical implementation.

7.Advanced Technology in Artificial Intelligence & Data Analysis

Aug/2025

- Explore advanced AI and Data Analysis technologies shaping the future

8.Excel for Data Analysis - IBM

Feb/2026.

9.Machine Learning with Apache Spark -IBM

10. Databases and SQL for Data Science with Python -IBM

11. Python for Data Science, AI & Development – IBM

12. Neo4j Fundamentals – Neo4j
